ASTM :ASTM A276

ASTM A276 is a standard specification for chromium-nickel stainless steel and chromium-nickel-molybdenum stainless steel bars, rods, and wire. It covers a wide range of grades, including 304, 316, and 316L, which are commonly used in a variety of applications, including chemical processing, food processing, and medical equipment. The standard specifies the chemical composition, mechanical properties, and testing methods for these materials.
