Figure 3: [Microbiological culture](#) of *Staphylococcus aureus* on a petri dish. The image shows a clear glass petri dish containing a white, opaque, and slightly raised bacterial culture. The culture is centered on the agar surface and has a well-defined, circular edge. The surrounding agar is clear and colorless.

Figure 3 illustrates the [experimental setup](#) for measuring the thermal conductivity of the material. The setup includes a heat source, a sample, and a heat sink, all connected by a thermal path. The heat source is a cylindrical block that provides a constant heat flux to the sample. The sample is a rectangular block of the material being tested. The heat sink is another cylindrical block that absorbs the heat from the sample. The thermal path is a thin layer of thermal paste that ensures good contact between the heat source, sample, and heat sink. The heat flux is measured by a heat flux sensor located between the heat source and the sample. The temperature of the sample is measured by a thermocouple located in the center of the sample. The thermal conductivity is calculated using the heat flux, the temperature difference, and the dimensions of the sample.

WIDE RANGE OF APPLICATION

Suitable for: home life/coffee shop/restaurant/wedding/party/Christmas etc

HOME LIFE

COFFEE SHOP

RESTAURANT

WEDDING

PARTY

CHRISTMAS ETC

Different From The Peer

Own professional shipping company(Shenzhen Sunny Worldwide logistics)

20+ years freight history and WCA members.

PACKING

We have Normal packing, PVC box
Window box, carton box, pallet Color box, White box, ect.
of course, we can customize
Individual gift box for you.

Gift box

Carton

Pallet

Wooden case
