borosilicate glass is a type of glass that is made from silica and boron oxide. It is known for its high resistance to thermal shock and chemical corrosion. Borosilicate glass is commonly used in laboratory glassware, such as beakers, flasks, and test tubes, as well as in medical devices and pharmaceutical packaging. The glass is typically clear and colorless, with a smooth, polished surface. It is also known for its durability and strength, making it a popular choice for applications that require high performance and reliability.

This [jam jar](#) is a perfect example of a simple yet functional design. It is made of clear glass, which allows you to see the contents inside. The jar has a wide mouth, making it easy to fill and empty. It is also a great choice for storing preserves, as the glass is non-reactive and does not absorb odors. The jar is available in various sizes to suit your needs. Whether you are a home cook or a professional baker, this jar is a must-have in your kitchen.

WIDE RANGE OF APPLICATION
